

VizSmart

SELF-CHECK KIOSK

The RFID Self Check In/Out Station serves the function of borrowing, returning and renewal of items for the VizSmart System. It is a simple and economical solution catered to different sizes of library.

The patron self-service RFID Self Check In/Out Station frees librarians from doing conventional borrowing, returning and renewal process, thus allowing them to contribute to other more value-added library tasks and services to the patron and library. The Patron ID may be identified through barcode, magnetic, smart card or simple keypad entry.

The simple and helpful touch-screen GUI display allows patron to self-handle borrowing and returning processes (DIY). Basically they simply need to select the menu and place the borrow/return items on the desktop pad.

For renewal, the patron just needs to select and confirm the displayed loan items on screen and the system will extend its loan period automatically, without having to present the items physically

Features

- ✓ Borrow, Return and Renewal
